Sequence 20455, Application US/0925291A

Patent No. 655175

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

TITLE OF INVENTION: NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

RIOR APPLICATION NUMBER: US 60/094,190

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 20495

FENTILIAND CASE OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                             ; LOCATION: (15),(28),(61); CTHER INFORMATION: Identity of amino acid at the above locations are unknown. US-09-252-991A-20495
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 6
US-10-290-579A-165
US-10-290-579A-165
Sequence 165, Application US/10290579A
Patent No. 6897301
GENERAL INFORMATION:
APPLICANT: Hahn, Beatrice
APPLICANT: Gao, Fenge
APPLICANT: Shaw, George
TITLE OF INVENTION: CLONES AND SEQUENCES FOR NON-SUBTYPE B ISOLATES OF HUMAN
TITLE OF INVENTION: IMMUNODEFICIENCY VIRUS TYPE 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 5855, Application US/09328352
Patent No. 656295
Batent No. 656295
GENERAL INFORMATION:
FAPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REPERENCE: GT-99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NO 5855
LENGTH: 180
         GENERAL INFORMATION:
APPLICANT: Hahn, Beatrice
APPLICANT: Gao, Fenda, Beatrice
APPLICANT: Shaw, George
TITLE OF INVENTION: CLONES AND SEQUENCES FOR NON-SUBTYPE B ISOLATES OF HUMAN
TITLE OF INVENTION: IMMUNODERICIENCY VIRUS TYPE 1
FILE REFERENCE: D6287D
CURRENT FILING DATE: 2002-11-08
PRIOR APPLICATION NUMBER: US 99/184,418
PRIOR FILING DATE: 1999-11-02
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 265, 7

Sequence 265 Application US/09731872

Patent No. US20020102604A1

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, Jean Baptiste

APPLICANT: Dumas Milne Edwards, Jean Baptiste

APPLICANT: Bougneleret, Lydie

APPLICANT: Bougneleret, Lydie

APPLICANT: Bougneleret, Lydie

APPLICANT: Bougneleret, Severin

TITLE OF INVENTION: FULL-LENGTH HUMAN CDNAS ENCODING POTENTIALLY SECRETED PROTEINS

FILE REFERENCE: 78-US/09/731,872

CURRENT APPLICATION NUMBER: US/09/731,872

CURRENT FILING DATE: 1999-12-08

PRIOR APPLICATION NUMBER: US 60/169,629

PRIOR APPLICATION NUMBER: US 60/187,470

PRIOR APPLICATION NUMBER: US 60/187,470

PRIOR PELING DATE: 1999-12-08

SOFTWARE: Patent.pm

SEQ ID NO 265

LENGTHARE: Patent.pm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          APPLICANT: Dumas Milne Edwards, Jean Baptiste

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hypothetical protein 274 - Rhodobacter capsulatus
L;Species Rhodobacter capsulatus
C;Species Rhodobacter capsulatus
C;Species Rhodobacter capsulatus
C;Accession: S17804
C;Accession: S17804
S;Burke, D.H.; Alberti, M.; Armstrong, G.A.; Hearst, J.E.
submitted to the EMBL Data Library, November 1991
A;Pescription: The complete nucleotide sequence of the 46 kb photosynthesis gene cluste

The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET

genome that affect the activity of GENSET or by supplementing the patients own production of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down regulate GENSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be in need of restorative therapy. The GENSET polypeptides may be used as antigens in the production of antibodies and in assays to identify modulators (agonists and antagonists) of GENSET nucleic acid of expression and activity. The present sequence is a GENSET nucleic acid of
expression by rectifying mutations or deletions in a patient's
                                                                                                                                                                                                                                                                                                                                                                        the invention

The present invention relates to novel GENSET polynucleotides (ABZ36404-ABZ36911) encoding polypeptides (ABP75963-ABP76368). The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps

The polynucleotides and polypeptides are useful in screening and diagnostic assays for abnormal GENSET expression and/or biological activity. They are also useful for screening of compounds for treating or preventing GENSET-related disorders, such as heavy metal toxicity, cancer, inflammatory diseases, immune disorders, and the neuromuscular, central nervous system (CNS), cardiovascular or gastrointestinal effects of the toxicity. The polynucleotides are useful for constructing or expanding chromosome maps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     treating heavy

Jobert

Bougueleret L,

The invention relates to full length GENSET human nucleic acids encoding potentially secreted proteins. The nucleic acids and the polypeptides they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate GENSET gene expression. For example, they be used to treat disorders associated with decreased GENSET gene expression by rectifying mutations or deletions in a patient's genome that affect the activity of GENSET or by supplementing the comment that affect the activity of GENSET polypeptides. Conversely, antisense nucleic acid molecules may be administered to down resplate GENSET expression by binding with the cells' own genes and preventing their expression. The sense and antisense nucleic acids may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and hence to determine which patients may be used as antigenes in the production of antibodies and in assays to identify modulators (agonists and antegonists) of GENSET polypeptides expression and activity. The present sequence is a GENSET nucleic acid of

The present invention relates to the isolation of human GSSP3

CO plypeptide, and polymucleotide sequences that encode it. The GSSP3

polypeptide reduces circulating blood glucose levels, increases insulin

sensitivity, and/or reduces body mass. The GSSP3 polypeptide and

caid metabolism, body weight loss, and prevention of body weight gain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated polypeptide comprising CCDD1-12

(cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CCDD, a biologically active acid sequence at least 90% identical to CCDD, a biologically active compared to an immunogenic fragment. Also included are the polymucleotides encoding CCDD1-12, a recombinant polymucleotide comparison operably linked to the CCDD polymucleotides, a cell transformed with the recombinant polymucleotide, a transgenic organism comprising the recombinant polymucleotide, an anti-comparison of CCDD polymucleotide and a comparison of CCDD polymucleotide and a comparison of CCDD polymucleotide and a cCDD polymucleotide microarray. The polypeptides, polymucleotide and a cCDD polymucleotide microarray. The polypeptides, polymucleotide and accomparase associated with aberrant expression of CCDD, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental currhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental currhosis, ansemia or mental retardation), neurological disorders (e.g. Alzahemer disease, Parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in
                                                                                                                                                                                                                                                                                                      cell proliferative disorder; arreriosclerosis; atherosclerosis; cirrhosis; hepatitis; paroxysmal nocturnal haemoglobinuria; psoriasis; polycythaemia vera; primary thromobocytopaenia; developmental disorder; renal tubular acidosis; amental retardation; epilepsy; AllDS; neurological disorder; Alzheimer disease; Parkinson's disease; asthma; reproductive disorder; infertility; autoimmune disorder; gout; allergy; inflammatory disorder; acquired immunodeficiency syndrome; uveitis; autoimmune thyroiditis; contact dermatitis; Crohn's disease; infection; diabetes mellitus; glomerulonephritis; irritable bowel syndrome; multiple sclerosis; osteoporosis; pancreatitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Baughn MR;

Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide
(acquired immunodeficiency syndrome) allergies, asthma, autoimmune thyroidities, contact dermatitis, Crohn's disease, diabetes mellitus, glomerulonephritis, gout, irritable bowel syndrome, multiple sclerosis, uveitis, osteoporosis, panoreatitis, rheumatoid arthritis, uveitis, or viral, bacterial, fungal, parasitic, protozoal or helminthic infections. They are also useful in the assessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of proteins associated with CGDD. The present sequence encodes a CGDD protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sato H, Ishii S;

of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contacting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polynucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide or as a probe CC is useful as a primer for synthesising the polynucleotide, or as a probe CC for detecting the polynucleotide. The polynucleotide and encoded proteins are useful as pharmaceutical agents and many disease-related proteins may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of genes may be included in them, for developing a diagnostic marker or cof gene therapy. The genes are involved in tissus and/or cell cranscription-related proteins, signal transduction-related proteins, transcription-related proteins, disease-related proteins and corristion or trade proteins and season of the encoded protein and genes cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The catal for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.

New nucleic acid molecules encoding 62 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.

Claim 1; Page 543-544; 716pp; English.

The invention relates to the isolation of genes (AAC69512-C69587) encoding 62 human secreted proteins (AAB38131-B38396). The genes can be

```
used to generate fusion proteins by linking to the gene for the human immunoglobulin G Fo portion (AAC69503) for increasing the stability of the fusion protein as compared to the human protein only. The genes and proteins are useful for preventing, amelicating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and entragonists are useful in the teumont and prevention of: (a) autoimmune disease e.g. rheumatoid arthritis; (b) hyperproliferative disorders e.g. neoplasms of the breast or liver; (c) cardiovascular disorders e.g. neoplasms of the breast or liver; (c) cardiovascular disorders e.g. neoplasms of (f) nervous system disorders e.g. Alzheimer's disease; (g) infections caused by bacteria, viruses and fungi; and (h) ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

proteins, useful for detecting, preventing, icating, treating and/or ameliorating cardiovascular diagnosing, prognosticating, disorders such as arrhythmia. Novel human secreted

Claim 21; SEQ ID NO 309; 1881pp; English.

The present invention relates to novel human secreted proteins (ABR49613-ABR49145) and their coding sequences (ACC50344-ACC50856). The proteins and their coding sequences are useful for the preparation of a diagnostic or pharmaceutical composition for diagnosing or treating a cardiovascular disorder (e.g., arrhythmia, tachycardia, cardiac arrest, coronary arteriosclerosis and myocardial ischaemia), neural disorders, immune

ABZ71479-ABZ71540 represent human secreted protein genomic fragments. The invention also encompasses antibodies specific for the secreted proteins, the use of the secreted proteins in drug screening, and recombinant vectors and host cells comprising a nucleic acid of the invention. The secreted proteins, nucleic acids encoding them, antibodies or antibody fragments specific for the secreted proteins, and modulators of protein activity are useful for diagnosing, treating, ameliorating or preventing digestive disorders. Such conditions include disorders of the mouth, coseophagus, stromach, small intestine, large intestine, liver, biliary tract and pancreas, and include cancers of these organs and tissues. The secreted proteins and their nucleic acids may also be used in the companient of immune disorders, inflammation, infection, hyperproliferative disorders, and to promote wound healing. Nucleic acids of the invention may be used for chromosome identification, chromosome continuously, in gene therapy, for identifying individuals from minute biological samples, as hybridisation probes, and as molecular weight markers. The present sequence represents a human secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ADB91834. Also disclosed is a recombinant vector comprising a polynucleotide of the invention, and a recombinant host cell comprising the recombinant vector. The polypeptide of the invention is useful in identifying a binding partner producting the polypeptide with a binding partner, and determining whether the binding partner increases or decreases activity of the polypeptide. The polypeptide, polymeleotide,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid encoding a human secreted protein is useful in diagnosing or treating diabetes or conditions related to diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated nucleic acid molecules ADB91065-

antibody or its fragment, agonist or antagonist are useful for preparing a pharmaceutical composition for diagnosing or treating diabetes or conditions related to diabetes. The present sequence is that of the human immunoglobulin Pc portion used to generate fusion proteins, increasing the stability of the fused protein as compared to the secreted protein only. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antidiabetic; antirheumatic; antiarthritic; antiinflammatory; antithyroid; antidiabetic; immunosuppressive; dermatological; nephrotropic; antiparthisonian; neuroprotective, nootropic; antibacterial; virucide; fungicide; antiparastic; antiparastic; antiarteriosclerotic; vulnerary; cytostatic; haemopoietic; haematologic; anaemia; autoimmune disorder; haemopoietic; haematologic; anaemia; autoimmune disorder; haemotodid arthritis; inflammation; Grave's disease; diabetes; systemic lupus erythematosus; glomerulonephritis; neurodegenerative; Parkinson's; Alzheimer's; wound; hyperproliferative; atherosclerosis; cancer; hacterial; viral; fungal; parastitc infection; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human secreted polypeptide for diagnosing, preventing or treating thematopoletic or hematologic disorders (e.g. anemia), autoimmune disorders (e.g. diabetes) or hyperproliferative disorders (e.g. cancer or atherosclerosis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel human secreted polypeptide comprising defined sequence given in the specification. The polypeptide, nucleic acid molecule, antibody, agonist or antagonist of the invention may be useful for preparing a composition for diagnosing or treating a haemopoietic or haematologic disorder such as anaemia, autoimmune disorders such as rheumatoid arthritis, inflammation, Grave's disease,

diabetes, systemic lupus erythematosus or glomerulonephritis, neurodegemerative disorders including Parkinson's disease and Alzheimer's disease, wounds and hyperproliferative disorders including atherosclerosis or cancer, as well as bacterial, viral, fungal or parasitic infections. The polypeptide may also be used during gene therapy procedures and for identifying a binding partner by contacting the polypeptide with a binding partner and determining whether the binding partner increases or decreases the activity of the polypeptide. The current sequence is that of the human secreted protein-related DNA of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Reducing circulating glucose levels or increasing insulin sensitivity, useful for reducing body mass or preventing body weight gain, comprises administering composition comprising GSSP3 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide, and polynucleotide sequences that encode it. The GSSP3 polypeptide reduces circulating blood glucose levels, increases insulin sensitivity, and/or reduces body mass. The GSSP3 polypeptide and polynucleotide sequences are useful in serum glucose regulation, fatty acid metabolism, body weight loss, and prevention of body weight gain. Compositions comprising GSSP3 polypeptides are useful for controlling
                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Yen-Potin F;
                                                                                                                                                                                                                                                                                                                                              TIGATITIGACCGGIGCT 51

AAD46949-AAD46954 represent cDNAs corresponding to novel human protein
genes, and AAB29290-AAB29295 represent the proteins they encode. AAD46955
-AAD46963 represent novel human protein genes and AAB29296- AAB29297
crepresent novel human protein fragments. Sequences of the invention are
useful for preventing, treating or ameliorating medical conditions or
council healing. These conditions include diseases or disorders of the
immune system (e.g. HIV infection, autoimmune disorders, arthritis,
athma, AIDS, sepsis, psoriasis or inflammation) or neuromuscular system
(e.g. multiple sclerosis, myocarditis, or myopathies), disorders
cassociated with Fc receptor binding by antibody (e.g. immune-mediated
thrombocytopaenia, inflammatory responses or allergic responses),
hyperproliferative diseases (e.g. multiple myeloma, rhabdomyosarcoma,
lung cancer, brain cancer or leiomyosarcoma), gastrointestinal disorders
(e.g. Crohn's disease or duodenal ulcers), pulmonary disorders
infections or cardiovascular disorders (e.g. hyperaemia, myocardial
cinfaction or cardiac oedemal. The invention is useful in gene therapy.
The present sequence represents human protein gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ô
                                                                                                                                            New proteins encoded by genes contained in cDNA clones (e.g. HAPQL38 or HHFOS77), useful for preventing, treating, ameliorating or diagnosing e.g. AIDS, sepsis, brain cancer, Crohn's disease or myocardial infarction.
